

Environmental Policy

Unipart Rail will operate an Environmental Management System that complies with the requirements of ISO 14001 and is in accordance with the Unipart Environmental Policy.

We will repair, manufacture and supply materials and assemblies in an environmentally responsible manner. We see our environmental performance as an important aspect of our wider Corporate Social Responsibility.

After careful analysis Unipart Rail will target its most significant environmental aspects and implement actions designed to mitigate their impacts consistent with the technology available and economic use of resources.

Responsibility for the Environmental Management System (EMS) and environmental performance of Unipart Rail rests ultimately with the Managing Director and Senior Executive Team. Nevertheless, every employee also has responsibilities within the system and it is considered essential to develop and secure commitment from all employees and other stakeholders.

Unipart Rail will comply with all current environmental legislation but the Company's actions and attitude to environmental matters will go beyond simple compliance. Unipart Rail is committed to the pro-active prevention of pollution and continual improvement in its environmental performance.

Annual objectives and targets for improving the Company's performance in key areas of activity will be set and monitored by management review.

The Unipart Rail Executive Team believes that the implementation of this EMS and the continual development of the Company's environmental performance will produce benefits for our business, our customers, employees, and all other stakeholders.
